The present sequence encodes native SK. SK is a secretory protein of haemolytic Streptococcus able to activate human plasminogen (HPlg) to habsmin (HPlm), which is a serine protease able to catalyse the hydrolysis of fibrin in blood clots. The SK is useful as a thrombolytic agent in the treatment of vascular thromboembolytic symptoms such as acute myocardial infarction. Compared with wild-type SK, the K59E mutant is more resistant to degradation by human plasmin and is more effective both in acting as a fibrolytic agent and in activating human plasminogen. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcus equisimilis H46A, streptokinase; mutant, fibrinolytic; plasma clot; hydrolysis; haemolytic Streptococcus; plasminogen; plasmin; serine protease; fibrin; blood clot; thrombolytic; vascular thromboembolytic symptom; acute myocardial infarction; fibrinolysis; resistance; ds.
                                    streptokinase polypeptide - useful as plasmin-resistant
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococcus equisimilis native streptokinase encoding DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a mutant streptokinase (SK) polypeptide in which at least one of the amino acids in the ProS8-Lya59-Serf0-Lya61 segment of the corresponding native SK is replaced by another amino acid. The present sequence encodes mutant SK K59E. SK is a secretory protein of plasmin (HPlm), which is a serine protease able to catalyse the hydrolysis of fibrin in blood clots. The SK is useful as a thrombolytic agent in the treatment of vascular thrombombolytic symptoms such as a cute myocardial infarction. Compared with wild-type SK, the K59E mutant is more resistant to degradation by human plasmin and is more effective both in acting as a fibrolytic agent and in activating human plasminogen
                                                                                                                                                                                                                                                                                              plasma clot; hydrolysis; haemolytic Streptococcus; plasminogen; plasmin; gerine protesses; fibrin; blood clot; thrombolytic; vascular thromboembolytic symptom; acute myocardial infarction; fibrinolysis; resistence; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a DNA vector (A) for stable transformation and expression of genes (I) in plastids, where (I) is inserted in an artificial intergene region (AIR) formed by combining two 5'-untranslated regions (5'-UTRS) of genes that transcribe in different directions and are derived from plants of different divisions or classes. (A) are used to produce transplastomic angiosperms that have improved agronomic properties (e.g. resistance to biotic or abiotic stress) or express a very wide range of agricultural, veterinary, pharmaceutical, nutritional or industrial products, e.g. enzymes, vaccinating antigens, cytokines or immunoglobulins. Use of (A) eliminates the need for a transposon for gene insertion; inserted genes do not require promoters and terminators; and the structure of flanking sequences in (A) can be eliminated by homologous recombination. (A) provides efficient and stable expression of genes without causing any functional alterations. This sequence
DNA vector for transformation and expression in plastids, useful e.g. for producing pharmaceutical proteins or improving agronomic properties, has gene inserted in artificial intergene region.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5876999
GENERAL INFORMATION:
APPLICANT: Hua-Lin Wu
APPLICANT: Guey-Yueh Shi
TITLE OF INVENTION: Preparation of novel streptokinase
TITLE OF INVENTION: mutants as improved thrombolytic agents
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADDRESSEE: Jeing & Chang
